13TH ANNUAL

GOVERNMENT CONFERENCE

What's The Conference All About?

- ☐ Assessment of Present FICAM Architecture
- ☐ Current Strategies for Secure Identity
- ☐ Next Generation For Identity Security and User Authentication (ie. mobile)
- ☐ Convergence of Identity Issues Involving the Internet, Healthcare, Payments, Transit

13TH ANNUAL GOVERNMENT CONFERENCE

Tuesday AM Plenary Agenda

- ❖ Identity and Managing Risk-based Access Decisions
Speaker: *Richard Parry, CEO, Parry Advisory*
- ❖ Continuous Diagnostics and Mitigation Program,
Speaker: *Jim Quinn, Deputy CISO (HQ) Enterprise Services, Department of Homeland Security*
- ❖ Break – Opening of the Exhibit Hall
- ❖ How Government and Private Industry Can Help Secure the Enterprise from Cyber Threats
Speaker: *Christine Harada, Associate Administrator, General Services Administration OGP*
- ❖ The Nigerian National ID Program
Speakers: *Christian 'E Onyemenam, CEO, National Identity Management Centre of Nigeria*
- ❖ Plenary Session Roundtable Discussion: The Roadmap for Government Identity Credentialing For the Next 10 Years
Moderator: *Randy Vanderhoof, Smart Card Alliance* Panelists: *Mike Butler, DOD; Judith Spencer, CertiPath; Greg Abrenio, Cyberarmed Security; James Sheire, NIST*

13TH ANNUAL GOVERNMENT CONFERENCE

Certification Training for E-PACS

About CSEIP

- The Certified System Engineer ICAM PACS (CSEIP) Training and Certification Program provides advanced training for systems engineers configuring and testing E-PACS to align with government-wide specifications
- This training and certification is recognized and approved by GSA

About the Training

- Comprehensive three-day program includes expert classroom instruction, hands-on training using commercial E-PACS equipment and testing for competency on course objectives
- Course offers instructor-led training on how E-PACS work, how PKI is managed, and how PIN/PIN-I credentials interface with security systems
- Individual test workstations using commercial E-PACS hardware and software provides hands-on exercises for configuration of live PKI-based access control systems
- A comprehensive written and practical exam wraps up the program with certificates issued upon successful certification

Who Should Attend?

- Commercial security firms looking to sell and install ICAM PACS to GSA managed properties under updated GSA procurement guidelines for vendors and integrators
- Physical access control vendors who need to train their employees and resellers about proper steps to configure PKI-based PACS
- Government security officials responsible for implementing and operating PACS at their department or agency

Meets Federal Requirements and Highest Industry Standards

- Certification means that you have passed a rigorous, GSA-approved training program which demonstrates your ability to efficiently and effectively implement PKI and federal ICAM architectures for E-PACS
- CSEIPs demonstrate knowledge of the latest security industry standards and meet federal procurement requirements
